1. What is the fundamental unit of computing in Infrastructure as a Service type on the cloud?

- Physical Server
- Virtual Machine
- Subnet
- Block of Storage

Clear selection

2. What is the fundamental unit of computing in Platform as a Service type on the cloud?

- ○ Application Server
- ○ Container
- ◉ Build Tool
- ○ Run Time Libraries

Clear selection

3. Which cloud deployment model enables you to connect your on-premises workloads with resources you have deployed with a public cloud provider such as AWS?

- ○ Private cloud
- ○ Public cloud
- ◉ Hybrid cloud
- ○ Hyper cloud

Clear selection

4. What is a hypervisor?

- ◉ Software that enables you to create and managed virtualized resources running on physical hardware, such as VMs
- ○ Software used to monitor the health of your Windows servers
- ○ Software used to create HA websites

Software used to create HA websites

Hardware that enables you to increase the performance of your physical servers

Clear selection

5. Which of the following is a prime example of IaaS?

A service that gives you access to configure underlying virtual compute, storage, and network resources to host your application

A service that abstracts the underlying infrastructure, allowing you to focus on your application code deployment process

A service that hosts and delivers a complete application via a public network, with no access to any underlying infrastructure

A service that allows you to consume hardware resources for a short lease period and pay on a metered basis

Clear selection

6. Which of the following is a prime example of PaaS?

A platform that hosts and delivers a complete application via a public network, with no access to any underlying infrastructure

A service that gives you access to configure underlying virtual compute, storage, and network resources to host your application

A service that abstracts the underlying infrastructure, allowing you to focus on your application code deployment process

A service that allows you to build infrastructure using code for repeat deployments in different environments

Clear selection

7. Which of the following is a prime example of SaaS?

- ○ A service that gives you access to configure underlying virtual compute, storage, and network resources to host your application
- ○ A service that abstracts the underlying infrastructure, allowing you to focus on your application code deployment process
- ◉ A service that hosts and delivers a complete application via a public network, with no access to any underlying infrastructure
- ○ A service that allows developers to adopt DevOps strategies for their software development life cycle

Clear selection

8. Which of the following statements closely relates to the advantage of cloud computing that discusses the ability to go global in minutes?

- ☐ The ability to trade capital expenses for variable expenses and thus avoid huge CAPEX.
- ☑ The ability to provision resources just in time for when you need them using tools such as Auto Scaling.
- ☑ The ability to deploy your applications across multiple Regions with just a few mouse clicks.
- ☑ The ability to focus on experimentation and the development of your applications rather than infrastructure builds, management, and maintenance.

9. In simple terms, define what software architecture is?

the architecture of a system describes its major components, their relationships (structures), and how they interact with each other. Software architecture and design includes several contributory factors such as Business strategy, quality attributes, human

includes several contributory factors such as business strategy, quality attributes, human dynamics, design, and IT environment.
Architecture serves as a blueprint for a system.
it is basically is a design plan that describes the elements system , how they fit and work together

10. If you use a cluster that is managed by a cloud provider, which of these will be managed for you by the cloud provider?

- ○ Monitoring
- ○ Networking
- ○ Security management tasks
- ◉ All of the above

Clear selection

11. You have been asked to design a storage system for a web application that allows users to upload large data files to be analyzed by a business intelligence workflow. The files should be stored in a high-availability storage system. File system functionality is not required. Which storage system in cloud should be used?

- ○ Block storage
- ◉ Object storage
- ○ Cache
- ○ Network File System

Clear selection

12. In Agile projects, setting the proper communication channels is the most important task at the team building stage. Which of these leads to fast and accurate communication

- ☑ Trust

- [ ] Sitting together
- [x] Real customer involvement
- [x] Ubiquitous language

13. Seeking feedback and business alignments in Agile projects are usually part of:

- ○ Daily stand-up meetings
- ○ Frequent demo
- ○ Iterative planning
- ◉ Retrospective meeting

Clear selection

14. An Agile team is working together for a long time in a project. So, now they have stopped conducting the iteration retrospective thinking that it will be just a waste of time. Is the team doing the right thing?

- ○ Yes, as there won't be any new findings because they have been working together for long.
- ◉ No, the iteration retrospective is for the last iteration completed and there will always be something different in every iteration.
- ○ Yes, as the project manager should be telling them if it is necessary
- ○ No, because this is a team building exercise

Clear selection

15. Agile principle strongly recommends daily stand-up meeting as this helps in

- ○ Surfacing the problems early
- ○ Keeping the team together
- ○ Making the team disciplined

Making the team disciplined

- [x] As status updation for the project manager

Clear selection

16. _____ data store is an extension to traditional table structures. Supports variable sets of columns (column families) and is optimized for column-wide operations (such as count, sum, and mean average).

newsql based db(Relational database)

17. Document data store is defined as:

- [ ] A very simple structure. Sets of named keys and their value(s), typically an uninterpreted chunk of data.
- [x] Any treelike structure can be represented as an XML or JSON document, including things such as an order that includes a delivery address, billing details, and a list of products and quantities.
- [ ] A single fact represented by three elements: The subject you're describing, name of its property or relationship to another subject and its value.

Clear selection

18. Natural Language Processing (NLP) is the process of looking at words, phrases, and sentences and identifying not only things (people, places, organizations, and so on) but also their relationships. Which data store helps to preserve semantics of NLP?

- [ ] Key Value Data Store
- [ ] Dictionaries
- [ ] Document Data Store
- [x] Graph Data Store

Clear selection

19. Support personalization: Similar to the user-session requirement, but longer-lived, is the concept of user service personalization. This is where the front-end application is configured by users for their specific needs. Which data store helps in supporting such personalization?

- (●) Document Data Store
- ( ) RDBMS
- ( ) Key Value Data Store
- ( ) Graph Data Store

Clear selection

20. Define what refers to a *'cloud native application'*.

cloud native applications are an application based on the cloud , opposed to an application that was re-architected to run in the cloud . Having the power of a massively scalable, flexible, distributed platform with a huge amount of on-demand tools and services inevitably changes the way to develop such a app.
